SAN DIEGO POLICE FORENSIC SCIENCE SECTION

## QUALITY INCIDENT REPORT

CASE \# $\qquad$

CHARGE (S) $\qquad$

PROPERTY TAG \# or INCIDENT \# $\qquad$ ITEM \# or BARCODE $\qquad$ 2-1

DESCRIPTION OF ITEM Swab taken from the handle of a knife (Item 2)

STAFF SAMPLE \# ASSOCIATED W/ EVIDENCE 88
\% CONTRIBUTION $\qquad$

Interpretation of sample affected by presence of staff member?
YES
NO

## ADDITIONAL COMMENTS

A mixture of DNA from four people was obtained from the swab of the knife handle (2-1). The STRmix results indiciated a ratio of 1:13:16:70. The $70 \%$ contributor was consistent with the victim (blood), the $16 \%$ was consistent with the staff member. The $13 \%$ and $1 \%$ were not discriminating enough for CODIS. It is inconclusive as to whether the absence of the staff member would have allowed a CODIS search on the DNA types foreign to the victim. The handle of the knife was re-swabbed and a mixture of DNA from at least two people was obtained. The ratio was 1:99, with the victim being the $99 \%$ contributor. The $1 \%$ contributor was not discriminating enough for CODIS.

## ANALYST

DATE
12/3/2015

Note: Please attach a copy of the STRMix Database Hit Report or Local Match Detail Report, a copy of the page of notes detailing the examination of the item (s) in question, the electropherogram, the first page of the STRMix deconvolution, and/or any other pertinent documentation.

## San Diego Police Department Forensic Biology Section - Evidence Inventory Worksheet

## Item Name:

One knife with a black handle. Blue apparent dye was observed all over the knife. Brown/yellow staining was observed on the knife blade and handle. Two stains, one on each side of the knife blade, tested positive with a presumptive test for blood and were swabbed as 2-2 and 2-3 (see photos below). A yellowish stain on the knife handle tested positive with a presumptive test for blood. The entire knife handle, avoiding yellow and brown/yellow staining was swabbed as 2-1. This swab tested negative with a presumptive test for blood.
phenol +; swabbed apparent bloodstain as 2 -
